PRESENTATION TIPS

#1 WHAT TO INCLUDE

- **The point is to attract audience attention with a good way**

- Create a structure with parts etc and includes who says what when / storyline

- Use inrows and outrows (transitions) between topics or when changing presenters

- Use images, sketches, videos and anything visual to support your topic

- SHOW WHAT IT DOES AND WHAT YOU DID AND NOT WHAT IT DOESN'T WORK AND WHAT YOU DIDN'T IMPLEMENT.

#2 WHAT TO AVOID

- When speaking, avoid too many 'mmm', 'aaaa', 'eeee'

- For the features that are not working/implemented yet, you can say that will be implemented in future deployments.

- Become too technical (e.g. showing your code) unless it's something unique or worth showing

- NO LAST MINUTE CHANGES ON THE PRESENTED PROJECT

#3 MUST DO

- Practise your presentation in front of a camera. record it and watch it. Make changes and repeat until you feel comfortable.

- You must not have attention on how you look or how you sound. Your attention should be on the app or at the audience.

- Have as backup a local WORKING version

- When you share your screen, your environment should be ready and don't set it up. E.g. the app you are presenting should be running.

#4 NICE TO HAVE

- Deploy on a public address so viewers can interact with it themselves

- It's responsive

- Presentation slides/video

- Ideally your voice is calm and natural. If not, make sure you don't speak fast and make sure you have silence moments between sentences

- Make your voice tone excited, boring, serious and not the same all the time

- You smile
